

a PoliticalCoords: identifiers select learned coordinates

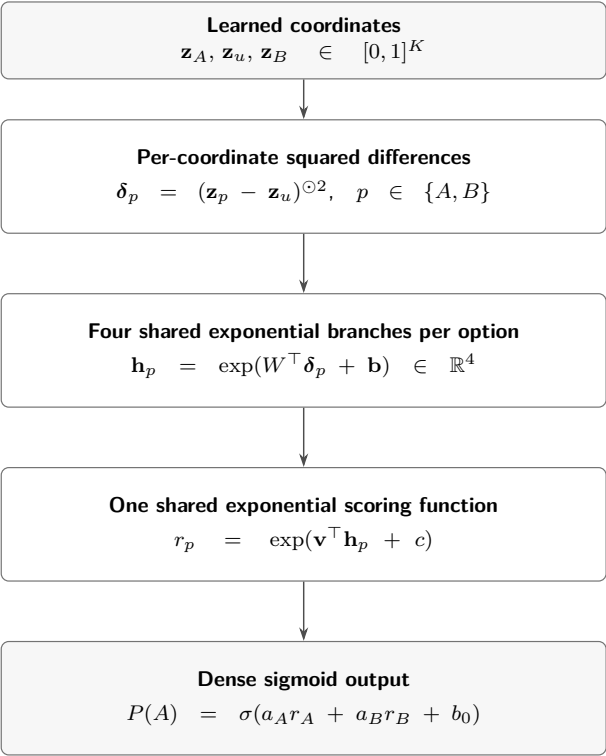

Illustrative one-hot inputs; the implementation uses indexed lookups

The proposal weight table W_P is shared by A and B ; W_U stores participant weights.
Each choice model jointly estimates its own coordinates and choice parameters.

b Flexible choice head

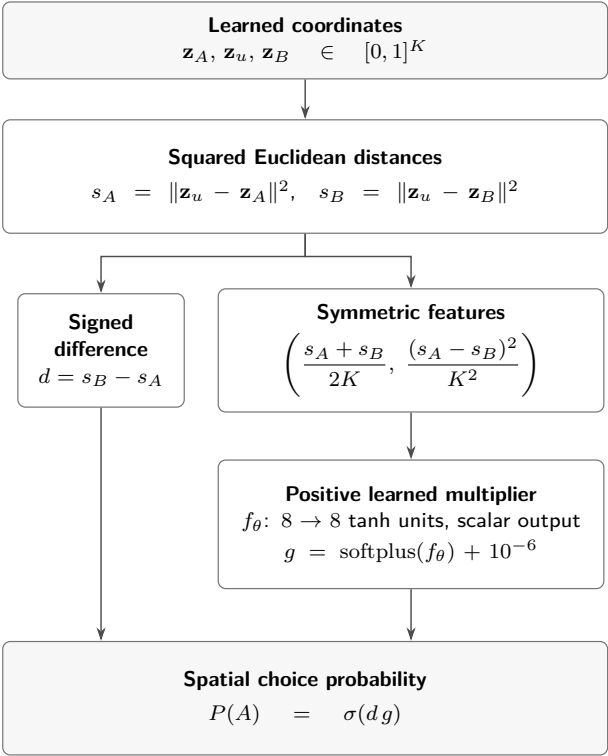

20 choice parameters in two dimensions

No constraint requires the nearer option to be favored.

c Positive symmetric choice head

105 choice parameters in two dimensions

The nearer option is favored; swapping options complements the probability.
